Journal of Materials Processing Technology 151 (2004) 378–383

Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

Subject Index of Volume 151

Advanced plastic processing technology
Some advanced plastic processing technologies and their numerical simulation, 63
Aerofoil blades
An FE simulation and optimisation approach for the forging of aeroengine components, 208
Algorithm of plasticity
An efficient pseudo-inverse approach for damage modeling in the sheet forming process, 88
Al-matrix composites
Study of the preparation of Al_2O_{3sf}·SiC_p/Al composites and their wear-resisting properties, 298
Analysis
Uniform principle on stress, strain and yield locus for analysing metal forming processes: the contribution of Prof. Z.R. Wang, 27
Anisotropy
Development of the CAE-assisted nano-indentation method for the evaluation of the anisotropic mechanical-properties of thin films, 263
Automotive
Forming characteristics and mechanical parameter sensitivity study on pre-phosphated electro-galvanized sheet steel, 248
Automotive stamping
Universal formability technology and applications, 119
Average pressure
Experimental study and numerical simulation of the pressure distribution on the die surface during upsetting, 367
Axi-symmetric shell part
Study on intelligent control technology for the deep drawing of an axi-symmetric shell part, 98

Backward extrusion
The effect of backward extrusion on the whisker morphology of SiC_w/6061Al, 302
Bainite
Bake-hardening behavior of cold-rolled CMnSi and CMnSiCu TRIP-aided steel sheets, 141
Bainitic steel
Mechanical and fracture behavior of bainitic rail steel, 268
Bake-hardening (BH)
Bake-hardening behavior of cold-rolled CMnSi and CMnSiCu TRIP-aided steel sheets, 141
Blank design
Blank optimization in sheet metal forming using an evolutionary algorithm, 183
BSCCO
Mechanical processing of Ag/BSCCO high temperature superconductor tape, 18
Bulging
Recent developments in sheet hydroforming technology, 237
Bulging experiment
Sheet bulging experiment with a viscous pressure-carrying medium, 340

CAE-assisted nano-indentation
Development of the CAE-assisted nano-indentation method for the evaluation of the anisotropic mechanical-properties of thin films, 263
Change in elastic modulus
Evaluation of change in material properties due to plastic deformation, 232
China
A review of developments in the forging of connecting rods in China, 192
Cold strip rolling
Finite element modelling of mixed film lubrication in cold strip rolling, 242
Combined female die
Study on precision forging technology for a complex-shaped light alloy forging, 289
Complex-shape forging
Study on precision forging technology for a complex-shaped light alloy forging, 289
Complicated cross-section
Research on the precision bending of a workpiece with a complicated cross-section for manufacturing a large flange, 228
Composites
Neural network modeling and optimization of semi-solid extrusion for aluminum matrix composites, 126
Compression behavior
Structure evolution and compressive behavior of semi-solid Al–Si hypoeutectic alloy with re-melting heat treatment, 155
Computer simulation
Some new features in the development of metal forming technology, 39
Connecting rod
A review of developments in the forging of connecting rods in China, 192
Constitutive equation
Recent development in the mechanics of superplasticity and its applications, 196
Control
Research on the controlling of the thickness distribution in superplastic forming, 54
Curvature spring-back
Research on the relationship between the number of rotary draw bendings and the shape precision of a bent hat-section profile, 307

Damage modeling
An efficient pseudo-inverse approach for damage modeling in the sheet forming process, 88
Deep drawing
State of the art in micro forming and investigations into micro deep drawing, 70
Study on intelligent control technology for the deep drawing of an axi-symmetric shell part, 98
Deformation mechanism
Structure evolution and compressive behavior of semi-solid Al–Si hypoeutectic alloy with re-melting heat treatment, 155

Elsevier B.V.
doi:10.1016/S0924-0136(04)00984-7

Deformation non-uniformity
Explanation of the mushroom effect in the rotary forging of a cylinder, 178
Deformation work
Study on model of metal structure refinement during hot deformation, 115
Deforming pattern
A study of tube electromagnetic forming, 372
Dimensional accuracy
An FE simulation and optimisation approach for the forging of aeroengine components, 208
Dimensional errors
Dimensional errors of cold formed components using FE simulation, 355
Draw die engineering
Universal formability technology and applications, 119
Drawing in
Recent developments in sheet hydroforming technology, 237
Drawing process
Studies on the friction and lubrication characteristics in the sheet steel drawing process, 328
Dynamic recrystallization
A novel approach to determine the kinetics for dynamic recrystallization by using the flow curve, 33

Electromagnetic forming
A study of tube electromagnetic forming, 372
Evolutionary algorithm
Blank optimization in sheet metal forming using an evolutionary algorithm, 183
Experiment
Numerical simulation and experimental verification in the use of tailor-welded blanks in the multi-stage stamping process, 316
Experimental optimisation
Mechanical processing of Ag/BSCCO high temperature superconductor tape, 18
Expert system
Universal formability technology and applications, 119
Explicit finite element
Finite element simulation of the electromagnetic piercing of sheet metal, 350
Explicit solution
Sensitive factors in springback simulation for sheet metal forming, 217

FEM
Development of the CAE-assisted nano-indentation method for the evaluation of the anisotropic mechanical-properties of thin films, 263
FEM analysis
FEM analysis of tube pre-bending and hydroforming, 294
FEM simulation
Numerical modelling and simulation in sheet metal forming, 58
Finite element
An FE simulation and optimisation approach for the forging of aeroengine components, 208
Finite element analysis
Finite element analysis of the prestress wire-winding press, 255
Dimensional errors of cold formed components using FE simulation, 355
Finite element method
Automated sequence design for slab stretching with arbitrary height distribution using one-step FEM analysis, 146
Explanation of the mushroom effect in the rotary forging of a cylinder, 178
Recent development in the mechanics of superplasticity and its applications, 196
Finite element modeling
A preform design method for sheet superplastic bulging with finite element modeling, 284
Flange
Progress in large vessel forming: introduction of some innovations of Prof. Z.R. Wang, 12
Research on the precision bending of a workpiece with a complicated cross-section for manufacturing a large flange, 228
Flexible
Progress in large vessel forming: introduction of some innovations of Prof. Z.R. Wang, 12
Flexible forming
Viscous pressure forming (VPF): state-of-the-art and future trends, 80
Recent developments in sheet hydroforming technology, 237
Floating-plug
Study of the new floating-plug drawing process of thin-walled tubes, 105
Flow curve
A novel approach to determine the kinetics for dynamic recrystallization by using the flow curve, 33
Force plate
Experimental study and numerical simulation of the pressure distribution on the die surface during upsetting, 367
Forging
A review of developments in the forging of connecting rods in China, 192
An FE simulation and optimisation approach for the forging of aeroengine components, 208
Forging sequence design
Automated sequence design for slab stretching with arbitrary height distribution using one-step FEM analysis, 146
Formability
Universal formability technology and applications, 119
Deformation analyses of the integrated hydro-bulge forming of a spheroidal vessel from different preform types, 275
Forming
Wrinkling behavior of laminated steel sheets, 133
Forming characteristics and mechanical parameter sensitivity study on pre-phosphated electro-galvanized sheet steel, 248
Forming limit
Recent developments in sheet hydroforming technology, 237
Forward rod extrusion
Dimensional errors of cold formed components using FE simulation, 355
Fracture behavior
Mechanical and fracture behavior of bainitic rail steel, 268
Free deformation
Some advanced plastic processing technologies and their numerical simulation, 63
Free forging
Automated sequence design for slab stretching with arbitrary height distribution using one-step FEM analysis, 146
Friction and lubrication
Studies on the friction and lubrication characteristics in the sheet steel drawing process, 328
Friction variation
Finite element modelling of mixed film lubrication in cold strip rolling, 242
Fully enclosed die forging
Study on precision forging technology for a complex-shaped light alloy forging, 289
Future trends
Viscous pressure forming (VPF): state-of-the-art and future trends, 80

Genetic algorithm
Neural network modeling and optimization of semi-solid extrusion for aluminum matrix composites, 126

Grain refinement
Study on model of metal structure refinement during hot deformation, 115
Graphic representation
Graphical methods of representing the stress components on different inclined planes at one point, 334
Green metal forming
Tribological approaches for green metal forming, 223

Hollow component
Hydroforming of typical hollow components, 203
Hot forming
A novel approach to determine the kinetics for dynamic recrystallization by using the flow curve, 33
Hot-galvanized sheet steel
Studies on the friction and lubrication characteristics in the sheet steel drawing process, 328
Hybrid reinforcement
Study of the preparation of Al_2O_{3sf}-SiC_p/Al composites and their wear-resisting properties, 298
Hydraulic bulging
FEM analysis of tube pre-bending and hydroforming, 294
Hydroforming
Numerical modeling of the multi-stage sheet pair hydroforming process, 48
Hydroforming highlights: sheet hydroforming and tube hydroforming, 165
Hydroforming of typical hollow components, 203

IHBF
Progress in large vessel forming: introduction of some innovations of Prof. Z.R. Wang, 12
In-plane bending
Some advanced plastic processing technologies and their numerical simulation, 63
Integral hydro-bulging
Deformation analyses of the integrated hydro-bulge forming of a spheroidal vessel from different preform types, 275
Intellectualization
Study on intelligent control technology for the deep drawing of an axi-symmetric shell part, 98
Internal high pressure forming
Hydroforming highlights: sheet hydroforming and tube hydroforming, 165
Hydroforming of typical hollow components, 203
Inverse analysis
A novel approach to determine the kinetics for dynamic recrystallization by using the flow curve, 33
Inverse approach
Blank optimization in sheet metal forming using an evolutionary algorithm, 183
Isothermal precision forging
Study on precision forging technology for a complex-shaped light alloy forging, 289

Laminate
Wrinkling behavior of laminated steel sheets, 133
Large vessel
Progress in large vessel forming: introduction of some innovations of Prof. Z.R. Wang, 12
Laser forming
Laser and forming technology—an idea and the way of implementation, 3
Laser-assisted forming
Laser and forming technology—an idea and the way of implementation, 3
Local loading
Study on precision forging technology for a complex-shaped light alloy forging, 289

Manufacture of superconductors
Mechanical processing of Ag/BSCCO high temperature superconductor tape, 18
Massive forming
State of the art in micro forming and investigations into micro deep drawing, 70
Materials science
Some new features in the development of metal forming technology, 39
Mechanical milling
Phase and structural changes of $Nd_{12}Fe_{82}B_6$ alloy during mechanical milling in both an argon and a hydrogen atmosphere, 258
Mechanical properties
Laser and forming technology—an idea and the way of implementation, 3
Development of the CAE-assisted nano-indentation method for the evaluation of the anisotropic mechanical-properties of thin films, 263
Mechanical and fracture behavior of bainitic rail steel, 268
Mechanically activated disproportionation
Phase and structural changes of $Nd_{12}Fe_{82}B_6$ alloy during mechanical milling in both an argon and a hydrogen atmosphere, 258
Mechanics
Some new features in the development of metal forming technology, 39
Metal forming
Uniform principle on stress, strain and yield locus for analysing metal forming processes: the contribution of Prof. Z.R. Wang, 27
Some new features in the development of metal forming technology, 39
Metal matrix composites
The effect of backward extrusion on the whisker morphology of SiC_w/6061Al, 302
Micro forming
State of the art in micro forming and investigations into micro deep drawing, 70
Microstructure
Laser and forming technology—an idea and the way of implementation, 3
A novel approach to determine the kinetics for dynamic recrystallization by using the flow curve, 33
Mechanical and fracture behavior of bainitic rail steel, 268
Microstructure variation
Recent development in the mechanics of superplasticity and its applications, 196
Mixed film lubrication
Finite element modelling of mixed film lubrication in cold strip rolling, 242
Mohr diagram
Graphical methods of representing the stress components on different inclined planes at one point, 334
Morphology
The effect of backward extrusion on the whisker morphology of SiC_w/6061Al, 302
Multi-stage process
Numerical modeling of the multi-stage sheet pair hydroforming process, 48
Multi-step upsetting
Numerical simulation and experimental study on the multi-step upsetting of a thick and wide flange on the end of a pipe, 321

Mushroom effect
Explanation of the mushroom effect in the rotary forging of a cylinder, 178

Nano-indentation test
Evaluation of change in material properties due to plastic deformation, 232
Nano-structured material
Phase and structural changes of $Nd_{12}Fe_{82}B_6$ alloy during mechanical milling in both an argon and a hydrogen atmosphere, 258
NdFeB alloy
Phase and structural changes of $Nd_{12}Fe_{82}B_6$ alloy during mechanical milling in both an argon and a hydrogen atmosphere, 258
Neural network
Neural network modeling and optimization of semi-solid extrusion for aluminum matrix composites, 126
New material
Some new features in the development of metal forming technology, 39
New process
Some new features in the development of metal forming technology, 39
Normal stress
Graphical methods of representing the stress components on different inclined planes at one point, 334
Number of bending
Research on the relationship between the number of rotary draw bendings and the shape precision of a bent hat-section profile, 307
Numerical modelling
Mechanical processing of Ag/BSCCO high temperature superconductor tape, 18
Numerical modelling and simulation in sheet metal forming, 58
Numerical simulation
Some advanced plastic processing technologies and their numerical simulation, 63
Sensitive factors in springback simulation for sheet metal forming, 217
A study of the bulge-forming of polycarbonate (PC) sheet, 312
Numerical simulation and experimental study on the multi-step upsetting of a thick and wide flange on the end of a pipe, 321
Finite element simulation of the electromagnetic piercing of sheet metal, 350

Oil pan
Numerical modeling of the multi-stage sheet pair hydroforming process, 48
One-step analysis
Automated sequence design for slab stretching with arbitrary height distribution using one-step FEM analysis, 146
Optimization
Neural network modeling and optimization of semi-solid extrusion for aluminum matrix composites, 126
An FE simulation and optimisation approach for the forging of aeroengine components, 208
Oxide-powder-in-tube
Mechanical processing of Ag/BSCCO high temperature superconductor tape, 18

Paint baking
Bake-hardening behavior of cold-rolled CMnSi and CMnSiCu TRIP-aided steel sheets, 141
Phase and structural change
Phase and structural changes of $Nd_{12}Fe_{82}B_6$ alloy during mechanical milling in both an argon and a hydrogen atmosphere, 258
Pipe-billet
Numerical simulation and experimental study on the multi-step upsetting of a thick and wide flange on the end of a pipe, 321
Polycarbonate (PC) bulge-forming
A study of the bulge-forming of polycarbonate (PC) sheet, 312
Practical
Uniform principle on stress, strain and yield locus for analysing metal forming processes: the contribution of Prof. Z.R. Wang, 27
Precision bending
Research on the precision bending of a workpiece with a complicated cross-section for manufacturing a large flange, 228
Pre-phosphated electro-galvanized sheet
Forming characteristics and mechanical parameter sensitivity study on pre-phosphated electro-galvanized sheet steel, 248
Press technology
Hydroforming highlights: sheet hydroforming and tube hydroforming, 165
Pressure distribution
Experimental study and numerical simulation of the pressure distribution on the die surface during upsetting, 367
Pressure vessel
Deformation analyses of the integrated hydro-bulge forming of a spheroidal vessel from different preform types, 275
Pressure-infiltration
Study of the preparation of Al_2O_{3sf}-SiC_p/Al composites and their wear-resisting properties, 298
Prestress wire-winding press
Finite element analysis of the prestress wire-winding press, 255
Probe test method
Studies on the friction and lubrication characteristics in the sheet steel drawing process, 328
Pseudo-inverse approach
An efficient pseudo-inverse approach for damage modeling in the sheet forming process, 88

Re-melting heat treatment
Structure evolution and compressive behavior of semi-solid Al–Si hypoeutectic alloy with re-melting heat treatment, 155
Retained austenite
Bake-hardening behavior of cold-rolled CMnSi and CMnSiCu TRIP-aided steel sheets, 141
Reverse blowing process
A preform design method for sheet superplastic bulging with finite element modeling, 284
Review
A review of developments in the forging of connecting rods in China, 192
Rigid–plastic FEM
Finite element modelling of mixed film lubrication in cold strip rolling, 242
Rotary draw bending
Research on the relationship between the number of rotary draw bendings and the shape precision of a bent hat-section profile, 307
Rotary forging
Explanation of the mushroom effect in the rotary forging of a cylinder, 178

Section distortion
Research on the relationship between the number of rotary draw bendings and the shape precision of a bent hat-section profile, 307
Semi-solid alloy
Structure evolution and compressive behavior of semi-solid Al–Si hypoeutectic alloy with re-melting heat treatment, 155

Semi-solid extrusion
Neural network modeling and optimization of semi-solid extrusion for aluminum matrix composites, 126
Sensitivity
Forming characteristics and mechanical parameter sensitivity study on pre-phosphated electro-galvanized sheet steel, 248
Sensor
Experimental study and numerical simulation of the pressure distribution on the die surface during upsetting, 367
Shear stress
Graphical methods of representing the stress components on different inclined planes at one point, 334
Sheet
Sheet bulging experiment with a viscous pressure-carrying medium, 340
Sheet hydroforming
Hydroforming highlights: sheet hydroforming and tube hydroforming, 165
Recent developments in sheet hydroforming technology, 237
Sheet metal
Wrinkling behavior of laminated steel sheets, 133
Deformation analyses of the integrated hydro-bulge forming of a spheroidal vessel from different preform types, 275
Sheet metal electromagnetic piercing
Finite element simulation of the electromagnetic piercing of sheet metal, 350
Sheet metal forming
Numerical modelling and simulation in sheet metal forming, 58
State of the art in micro forming and investigations into micro deep drawing, 70
An efficient pseudo-inverse approach for damage modeling in the sheet forming process, 88
Study on intelligent control technology for the deep drawing of an axi-symmetric shell part, 98
Blank optimization in sheet metal forming using an evolutionary algorithm, 183
Sheet metal pairs
Numerical modeling of the multi-stage sheet pair hydroforming process, 48
Shell
Deformation analyses of the integrated hydro-bulge forming of a spheroidal vessel from different preform types, 275
Simulation
Hydroforming highlights: sheet hydroforming and tube hydroforming, 165
Numerical simulation and experimental verification in the use of tailor-welded blanks in the multi-stage stamping process, 316
Spherical
Progress in large vessel forming: introduction of some innovations of Prof. Z.R. Wang, 12
Springback
Sensitive factors in springback simulation for sheet metal forming, 217
Spring-back
Evaluation of change in material properties due to plastic deformation, 232
Stamping
Numerical simulation and experimental verification in the use of tailor-welded blanks in the multi-stage stamping process, 316
State-of-the-art
Viscous pressure forming (VPF): state-of-the-art and future trends, 80
Stress state
Typical stress states of tube hydroforming and their distribution on the yield ellipse, 345
Structure evolution
Structure evolution and compressive behavior of semi-solid Al–Si hypoeutectic alloy with re-melting heat treatment, 155
Superplastic bulging
A preform design method for sheet superplastic bulging with finite element modeling, 284
Superplastic experiment
Recent development in the mechanics of superplasticity and its applications, 196
Superplastic forming
Research on the controlling of the thickness distribution in superplastic forming, 54
Recent development in the mechanics of superplasticity and its applications, 196
Superplastic mechanics
Recent development in the mechanics of superplasticity and its applications, 196
Surface treatment
Tribological approaches for green metal forming, 223

Tailor-welded blank
Numerical simulation and experimental verification in the use of tailor-welded blanks in the multi-stage stamping process, 316
Temperature of phase transformation
Study on model of metal structure refinement during hot deformation, 115
Testing of mechanical properties of powder
Mechanical processing of Ag/BSCCO high temperature superconductor tape, 18
Thick and wide flange
Numerical simulation and experimental study on the multi-step upsetting of a thick and wide flange on the end of a pipe, 321
Thickness distribution
Research on the controlling of the thickness distribution in superplastic forming, 54
Thin metal film
Development of the CAE-assisted nano-indentation method for the evaluation of the anisotropic mechanical-properties of thin films, 263
Thin-walled
Study of the new floating-plug drawing process of thin-walled tubes, 105
Topologic optimization
Blank optimization in sheet metal forming using an evolutionary algorithm, 183
Tribology
Tribological approaches for green metal forming, 223
TRIP steel
Bake-hardening behavior of cold-rolled CMnSi and CMnSiCu TRIP-aided steel sheets, 141
Tube drawing
Study of the new floating-plug drawing process of thin-walled tubes, 105
Tube forming
Some advanced plastic processing technologies and their numerical simulation, 63
A study of tube electromagnetic forming, 372
Tube hydroforming
Hydroforming highlights: sheet hydroforming and tube hydroforming, 165
Typical stress states of tube hydroforming and their distribution on the yield ellipse, 345
Tube pre-bending
FEM analysis of tube pre-bending and hydroforming, 294

Unequal deformation
Some advanced plastic processing technologies and their numerical simulation, 63

Upsetting
Experimental study and numerical simulation of the pressure distribution on the die surface during upsetting, 367

Viscous pressure forming (VPF)
Viscous pressure forming (VPF): state-of-the-art and future trends, 80
Sheet bulging experiment with a viscous pressure-carrying medium, 340

Wall thickness distribution
A preform design method for sheet superplastic bulging with finite element modeling, 284

Wear-resisting properties
Study of the preparation of Al_2O_{3sf}-SiC_p/Al composites and their wear-resisting properties, 298

Whisker
The effect of backward extrusion on the whisker morphology of SiC_w/6061Al, 302

Wrinkling
Wrinkling behavior of laminated steel sheets, 133

Yield ellipse
Typical stress states of tube hydroforming and their distribution on the yield ellipse, 345
